SD-WAN Overlay-as-a-Service

Fortinet SD-WAN Overlay-as-a-Service provides a simple and easy on-demand secure connectivity between locations without the need for IT technical expertise.

WHAT'S SPECIAL ABOUT OaaS?

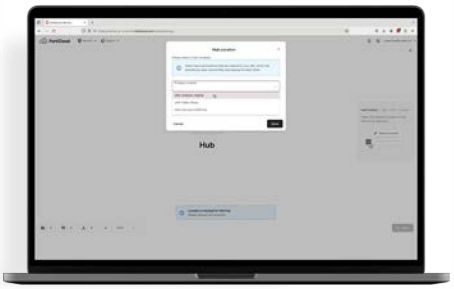

Turnkey Service

SaaS model, cloud hosted that save on hosting costs and management; lower deployment time and cost

Simple

Point-and-click interface, minimal technical expertise required

Continuous Operations

Fortinet managed, Geo-redundance hubs included with the service

WHY ORGRANIZATIONS NEED IT?

As not all organizations are the same in terms of # of sites, IT resources, budget, goals, etc., OaaS enables a quick setup of secure connectivity between locations to share files, access applications, video surveilance, and VoIP calls.

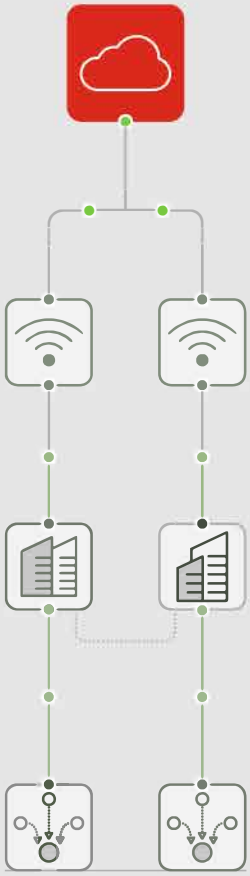

HOW DOES IT WORK?

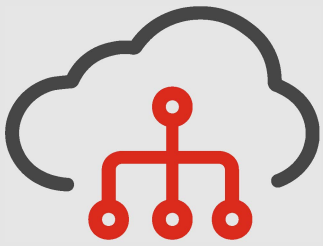

With the easy-to-use GUI that enables full mesh on-demand secure connectivity between locations, there are three simple steps involved in the configuration process:

1. **ENSURE** all FortiGates at the branch offices are registered with FortiCare and activated

2. **SELECT** two hosted overlay hubs for redundancy purposes that will facilitate the branch-to-branch connectivity

3. **ADD SITES** that need to be connected as well as the ISPs, subnets for each branch

HOW PRICING WORKS?

Licensing is very simple as it is per-FortiGate entitlement. For example, if you have 9 branch offices that you need to connect then you'd need 9 entitlements per FortiGate.
