Accelerated Transition for Optimal Protection and Performance

Aging firewalls offer ineffective protection from sophisticated new cyberthreats. Migrating complex legacy firewall configurations to next-generation solutions may seem relatively simple at a high level, but it actually presents risks and challenges.

FortiConverter Service complies best practices to help your transition to the latest FortiOS with confidence. Whether upgrading from a third-party firewall to a new FortiGate Next-Generation Firewalls (NGFW), or trading in your well-used FortiGate for the latest model, FortiConverter makes the migration more reliable and predicable, reducing human errors that occur in manual process, along with timeline and costs. Unlike free migration tools offered by other firewall vendors, FortiConverter Service automates the transition process by using proven conversion methodologies and diligent configuration validation by Fortinet security experts to ensure the least impact to business operations.

Reduces migration complexity

Eliminates common configuration errors

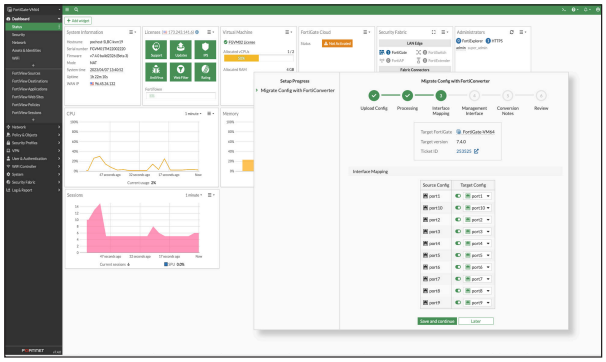

Saves time spent on manual configuration

Simplified Migration Experience for Security Reliance

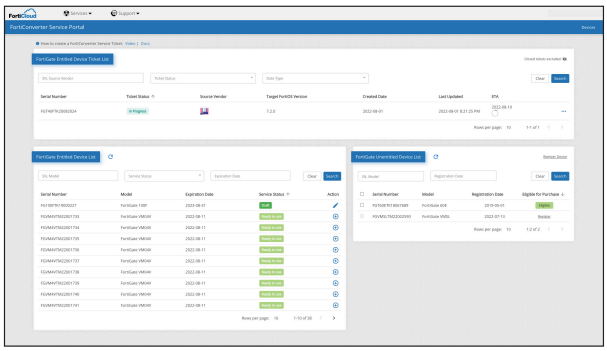

The FortiConverter service offers options to meet customers' unique needs including a one-time migration service, a migration software tool, or professional services tailored by certified experts.

FortiConverter Service: One-time Migration Service

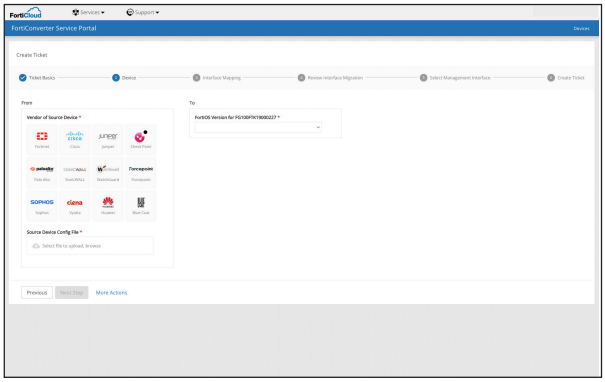

The rapid adoption of emerging technologies adds dynamic security challenges for businesses. Cyber criminals continue to outsmart dated firewalls. Fortinet offers FortiConverter Service to help your organizations move to the latest FortiGate NGFW quickly and safely. This migration service add-on is available for FortiGate hardware and virtual appliances.

Fully integrated with the latest FortiOS, FortiConverter Service helps optimize the upgrade experience to a new FortiGate by intelligently identifying and converting configuration files directly within the FortiGate management console.

FortiConverter Service offers an intuitive cloud portal for third-party firewall migration. Simply upload the source configuration files and let FortiConverter does the rest. You also have visibility of service entitlement and status across all FortiGate devices.

FortiConverter Service supports migration of interface NAT, firewall policy and address objects, as well as static routes for third-party vendor configuration to FortiGate configuration. All FortiGate to FortiGate configurations are fully supported.
