FERTINET

DATA SHEET

FortiMail 200F, 400F, 900F, 2000E, 3000E, 3200E and VM

FortiMail is a top-rated secure email gateway that stops volume-based and targeted cyber threats to help secure the dynamic enterprise attack surface, prevent the loss of sensitive data, and help maintain compliance with regulations. High performance physical and virtual appliances deploy on-site or in the public cloud to serve any size of the organization — from small businesses to carriers, service providers, and large enterprises.

Threat Prevention

Powerful antispam and antimalware are complemented by advanced techniques like outbreak protection, content disarm and reconstruction, sandbox analysis, impersonation detection and other technologies to stop unwanted bulk email, ransomware phishing, business email compromise and targeted attacks.

Data Protection

Robust data loss prevention, identity-based email encryption, and archiving help prevent the inadvertent loss of sensitive information and maintain compliance with corporate and industry regulations.

Security Fabric Integration

Integrations with Fortinet products as well as third-party components help customers adopt a proactive approach to security by sharing IoCs across a seamless Security Fabric. It also enables enhanced and complementary email security protection for Microsoft Office 365 environments through API-level integration.

Features

Multi-layered Antispam

More than a dozen sender, protocol and content inspection techniques shields networks and users from unwanted bulk email. It starts with assessing IP, domain and other reputations and continues with various validation methods such as bounce, authentication and recipient verification as well as DMARC, SPF and DKIM checks. Finally, message structure and content are analyzed based on the digital signature, keywords in context, image analysis, embedded URIs and more advanced techniques such as behavior analysis and spam outbreak protection. Working together, these techniques consistently identify and block 99.98% of spam in real-world conditions.

Integrated Data Protection

A robust set of capabilities for data loss prevention, email encryption and email archiving to safely deliver sensitive emails and protect against the inadvertent loss of data. These features facilitate compliance with corporate policies and industry regulations.

Intuitive Email Management

Real-time dashboards, rich reporting, central quarantines and enduser controls along with full MTA and mail-handling capabilities provide organizations full visibility and easy control over email traffic.

High Performance, Flexible Deployment

Easily scaling to handle more than 1.5m messages per hour with full antispam and antimalware filtering, FortiMail serves organizations of all sizes, with the option to deploy in gateway, transparent or server modes.

Powerful Antimalware

Combining multiple static with dynamic technologies which include signature, heuristic and behavioral techniques along with optional virus outbreak prevention, FortiMail protects against a wide range of constantly evolving threats.

Advanced Threat Protection

For an even stronger defense against the very latest threat classes like business email compromise and targeted attacks, FortiMail offers optional content disarm and reconstruction, sandbox analysis, sophisticated spoof detection and more.

API Integration

Leveraging Microsoft Office 365 APIs in Exchange Online, FortiMail is able to easily protect internal email as well as user inboxes from the latest threats.

Deployment

Multiple deployment modes - Transparent, Gateway and Server mode, with the addition of the new Office 365 API mode integration.

Gateway Mode: Provides inbound and outbound proxy mail transfer agent (MTA) services for existing email gateways. A simple DNS MX record change redirects email to FortiMail for antispam and antivirus scanning. The FortiMail device receives messages, scans for viruses and spam, then relays email to its destination email server for delivery.

Transparent Mode: Each network interface includes a proxy that receives and relays email. Each proxy can intercept SMTP sessions even though the destination IP address is not the FortiMail appliance. FortiMail scans for viruses and spam, then transmits email to the destination email server for delivery. This eliminates the need to change the DNS MX record, or to change the existing email server network configuration.

Server Mode: The FortiMail device acts as a standalone messaging server with full SMTP email server functionality, including flexible support for secure POP3, IMAP and WebMail access. FortiMail scans email for viruses and spam before delivery. As in Server mode, external MTAs connect to FortiMail, allowing it to function as a protected server.

Office 365 API Integration: FortiMail can be deployed out of line to simplify deployment, so no MX record change is required, and leverage the native Microsoft Office 365 API to deliver threat detection and postdelivery message clawback. Broad flexibility is possible with clawback to create policies that address compliance or unique business requirements, such as building search parameters based on keywords, file name or content type. These capabilities can serve as powerful complements to native Microsoft security features to bolster overall efficacy and reduce risk. In addition, forthcoming enhancements to the API integration will support advanced capabilities for real-time and internal mailbox scanning.

Features Summary

SYSTEM	
Wide range of deployment options:	
- Transparent, Gateway and Server Mode	
 On-prem or public or private cloud deployment Cloud-Managed Service 	
Inbound and Outbound Inspection	
Support for multiple email domains with per-domain customization:	
 MSSP multi-tenant support with white label support 	
– Multi-tier administration	
IPv4 and IPv6 Address Support	
Virtual Hosting using Source and/or Destination IP Address Pools	
SMTP Authentication Support via LDAP, RADIUS, POP3 and IMAP	
LDAP-Based Email Routing	
Per User Inspection using LDAP Attributes on a Per Policy (Domain) Basis	
Geographic IP location-based policy	
Comprehensive Webmail Interface for Server Mode Deployments and Quarantine Management	
Mail Queue Management	
Multiple Language Support for Webmail and Admin Interface	
SMTP RFC Compliance	
Modern HTML 5 GUI	
Independently tested by VBSpam, NSS, ICSA, SELabs	
Compatibility with cloud services e.g. Office365, Google G-Suite	
ANTISPAM	
FortiGuard Antispam Service	
- Sender and domain reputation	
 — Spam and attachment signatures — Dynamic heuristic rules 	
- Outbreak protection	
Full FortiGuard URL Category Filtering includes:	
- Spam, malware and phishing URLs	
— Pornographic and Adult URLs	
- Newly registered domains	
Greylisting for IPv4, IPv6 addresses and email accounts	
Local sender reputation (IPv4, IPv6 and End Point ID-based)	
Behavioral analysis	
Integration with third-party spam URI and real-time blacklists (SURBL/RBL) Newsletter (greymail) and suspicious newsletter detection	
PDF Scanning and image analysis	
·	
Block/safe lists at global, domain, and user levels Support for enterprise sender identity standards:	
– Sender Policy Framework (SPF)	
– Domain Keys Identified Mail (DKIM)	
 Domain-Based Message Authentication (DMARC) 	
Rexible action and notification profiles	
Multiple system and per-user self-service quarantines	
TARGETED ATTACK PROTECTION	
Content Disarm and Neutralization:	
 Neutralize Office and PDF documents (remove macros, active content, attachments, and more) Neutralize email HTML content by removing hyperlinks / rewrite URLs 	
Business Email Compromise (BEC): — Multi-level Anti-spoof protection	
 Impersonation analysis — manual and automatic address impersonation detection 	
- Cousin domain detection	

- Cousin domain detection

URL Click Protect to rewrite URLs and rescan on access

Integration with Fortilsolator Browser Isolation platform to neutralize browser-based threats

API INTEGRATION

Office 365 Integration:

- Post-delivery threat clawback
- Scheduled scan
- Real-time scanning
- Internal mail scanning

	CONTENT DETECTION
	FortiGuard Antivirus detection:
	- CPRL signature checking
	Heuristic based behavioral detection Grawper detection
-	- Greyware detection
	FortiGuard Virus Outbreak protection: — Global threat intelligence and data analytics
	Active content detection (PDF & Office Documents)
	Rescan for threats on quarantine release
-	······································
	Custom file hash checking
	CONTENT DETECTION
	Mime and file type detection
	Comprehensive data-loss prevention with file fingerprinting and sensitive data detection:
	 Automatic Windows fileshare and manual upload file fingerprinting Heathcare, Finance, personally identifiable information and profanity detection
	Automatic decryption of Archives, PDF and Office Documents using built-in and administrator-defined
	password lists and word detection within email body
-	PDF Scanning and image analysis
•	Dynamic Adult Image Analysis Service:
	 Identify and report or block the transmission of adult content
	ENCRYPTION
	Comprehensive encryption support:
	- Server to server TLS with granular cyphersuite control and optional enforcement
	- S/MIME
	 Clientless encryption to the recipient desktop using Identity Based Encryption (IBE) Optional Outlook plugin to trigger Identity Based Encryption (IBE)
	MANAGEMENT, LOGGING, AND REPORTING
	Basic/advanced management modes
-	Per domain, role-based administration accounts
-	Comprehensive activity, configurations change and incident logging and reporting
	Built-in reporting module
•	Detailed message tracking
-	Centralized quarantine for large scale deployments
-	Optional centralized logging and reporting with FortiAnalyzer
•	SNMP support using standard and private MIB with threshold-based traps
-	Local or external storage server support, including iSCSI devices
•	External Syslog support
-	Open REST API for configuration and management
	HIGH AVAILABILITY (HA)
	High availability supported in all deployment scenarios:
	Active-Passive mode
	 Active-Active configuration synchronization mode
	Active-Active configuration synchronization mode Quarantine and mail queue synchronization
-	

ADVANCED

- Policy-based e-mail archiving with remote storage options:
- Support for Exchange journal archiving
- Comprehensive data-loss prevention with file fingerprinting and sensitive data detection:
- Automatic CIFS and manual upload fingerprinting.
- Healthcare, Finance and personal information detection
- Advanced Email Server feature set including:
- Comprehensive webmail interface
- POP3, IMAP mail access
- Calendaring functions
- Undo Send
- SAML 2.0 SSO and ADFS integration for webmail and quarantine access
- SUPPORT

Simple support options with inclusive bundles

- Advanced RMA Support
- Professional services and installation support options

* Recommended sizing for Gateway and Transparent deployments. For Server Mode, see Server Mode Mailbox metric. If unsure, please validate the model selection by checking the peak mail flow rates and average message size detail with a FortiMail specialist.

** Hardware dependent. Indicative figures based on a VMWare 6.0 system utilizing 2x Intel Xeon E5-2620 v4 @ 2.10 GHz restricted to the specified number of cores.

*** Protected Email Domains is the total number of email domains that can be configured on the appliance. Domain Associations can be used to enable additional domains which share configuration with the primary domain to which they are assigned.

**** Transparent mode deployment is not fully supported on Microsoft HyperV and cloud hypervisors due to limitations in the available network configurations.
